

Push declined due to email privacy restrictions on GitHub

Push declined due to email privacy restrictions is an error that you may receive if you are pushing code to GitHub.

This error occurs when..

- You have enabled [the Block command line pushes that expose my email feature](#)
- You have not set your noreply email as your global or local user.email value in your git config.

To remedy this, run these commands after you have found your noreply email within [the GitHub Email Settings](#).

```
git config --global user.email "<Numeric Value>+<Your GitHub Username>@users.noreply.github.com"  
git rebase -i  
git commit --amend --reset-author
```

```
git rebase --continue  
git push
```

See [this Stack Overflow question](#) for more details.
